STATE OF ALABAMA
Information Technology Standard

STANDARD 622S2-00: DIAL-IN ACCESS/MODEM USE

Dial-in access poses a considerable number of risks. A modem connection can bypass access controls the firewall provides, and expose the network to vulnerabilities the firewall was designed to protect against. Employees granted dial-in access privileges must remain constantly aware that dial-in connections between their location and the State are literal extensions of the State network and that they provide a potential path to the State’s most sensitive information.

OBJECTIVE:
Protect the State’s electronic information resources from inadvertent compromise by authorized personnel using a dial-in connection by highlighting the risks associated with modem access, prohibiting modem use except where absolutely necessary, and ensuring required modems have been configured securely and are monitored effectively.

SCOPE:
These requirements apply to all Executive Branch agencies, boards, and commissions except those exempt under The Code of Alabama 1975 (Title 41 Chapter 4 Article 11).

REQUIREMENTS:

DIAL-IN ACCESS
State employees and authorized third parties (customers, vendors, etc.) may, with the IT Manager’s written approval, use dial-in connections to gain access to the State network.

Dial-in accounts are considered “as needed” accounts. If a dial-in account is not used for a period of six months the account shall be disabled. If dial-in access is subsequently required, the individual must request a new account.

Dialing directly into or out of a system that is simultaneously connected to the State’s network infrastructure is prohibited, except as required for remote maintenance. Remote maintenance connections shall comply with applicable State standards.

Dial-in access requires strong authentication consistent with authentication policy and remote access requirements.

It is the responsibility of employees with dial-in access privileges to ensure dial-in connections are not used by non-employees to gain access to State information system resources.

Account activity shall be monitored and audited to ensure that malicious activity is not occurring.

MODEM USE
The use of modems is generally prohibited except as described in this and other applicable policies and standards.

Modems shall not be part of the standard desktop computer hardware configuration.

Modems shall not utilize auto-answer mode such that they are able to receive incoming dial-up calls.
FAX AND MULTI-FUNCTION DEVICE MODEMS

Fax machines and multi-function (fax/printer/copier) devices connected to the state network shall have modems (if so equipped) disabled or configured such that they do not accept in-coming calls. Fax or multi-function devices for which in-bound modem (dial-in) access is required shall not be connected to the state network.

EXCEPTIONS

Agencies requesting exception to these requirements shall include in security plans a migration plan addressing modem alternatives and stating when compliance will be attained.

SUPPORTING DOCUMENTS:
- Information Technology Policy 622: Remote Access
- Information Technology Policy 623: Authentication
- Information Technology Policy 678: System Maintenance
